ÅF is an engineering and consulting company for the energy, industrial and infrastructure markets, creating progress for our clients since 1895.

By connecting technologies we provide profitable, innovative and sustainable solutions to shape the future and improve people's lives.

Building on our strong base in Europe, our business and clients are found all over the world.

ÅF – Innovation by experience.

Cover: ÅF and Charlotte Kalla reached an agreement on a four-year partnership. The partnership consists of a traditional sponsorship and an educational component designed to prepare Charlotte for life after her sporting career. Find out more on page 6.

SOLUTIONS FOR A
BETTER FUTURE

Annual Report 2014

BABELAN

More reliable electricity supply contributes to urban development

ÅF in Finland has a long-standing relationship with the Indonesian power company PT Cikarang Listrindo, and several joint projects have been carried out since 1996. The Babelan project, a new coal-fired power plant, is the third major collaborative project in a row and testament to ÅF's solid experience with large and complex international assignments.

Power company PT Cikarang Listrindo produces and distributes electricity to industrial clients and the national grid in Indonesia. The company began operations in 1992 and its current production capacity totals 755 megawatts.

Babelan is a coal-power project located outside the capital Jakarta, encompassing two power units with a combined capacity of 270 megawatts. The plant has two CFB boilers (circulating fluidised bed) featuring the latest technology and with low emissions. The power plant project has now entered the construction phase and is scheduled to go into commercial operation in 2016.

ÅF's team developed the project, from choice of site to the ultimate solution for the power plant configuration. ÅF's extensive experience of similar projects helped determine the technical configuration. The assignment involves satisfying stringent local and international environmental requirements. The ÅF team is responsible for construction management of the project and for overseeing installation and building works, as well as supervision of mechanical engineering, power generation and the facility for commercial and industrial distribution. ÅF will also supervise the commissioning of the power plant.

"I'm extremely happy with our long-term cooperation with ÅF. We've always been satisfied with their experienced teams and their understanding of our local needs. It means we can all focus on getting the project completed on time and in the way we want."

EC P'ng, Technical Director, PT Cikarang Listrindo
